

## What's it worth?

All the numbers at the end of the columns add up to the same total as the sum of the numbers at the end of the rows. There fore, if you ~~or~~ take the sum of the numbers at the end of the columns, and take it away by the sum of the numbers at the end of the rows,  $96 - 75$ , you will get 21. This is the correct as the 21 is what is missing from the sum of the numbers at the end of the rows.
