

1 2 - 1 1 - 1 5

Eleanor

4 bags contain numbers:

pick any ten number and only adding try make 37.

$$5 + 7 = 12 + 7 + 1 = 20 + 5 + 3 + 1 + 1 = 30 + 7 = 37 \text{ (X)}$$

$$5 + 5 = 10 + 7 = 17 + 5 = 22 + 5 =$$

$$7 + 5 = 12 + 3 = 15 + 5 = 20 + 7 = 27 + 5 = 32 + 5 = 37 \text{ (X)}$$

$$7 + 5 + 3 + 3 = 18 + 1 + 1 = 20 + 7 = 27 + 5 = 32 + 3 = 35 + 2 = 37 \text{ (X)}$$

$$7 + 5 = 12 + 3 = 15 + 1 = 16 + 5 = 21 + 3 = 24 + 1 = 25 + 3 = 28 + 5 = 33 + 3 = 36 \text{ (X)}$$

I don't think its possible because the number that you're trying to get is a odd number and the numbers you're able to pick are all odd. If you add two odd numbers they equal an even number and two evens equal an even number.
