

We did what

the woodcutter did and we made sure when we took a trunk we also took the branches twigs and leaves that were on the branch. So we did each question and we were left with 8889 leaves.

When there were 1 branch and we were asked to take one away we took one trunk but because the trunk also had branches twigs and leaves we made sure to take away 1 trunk 10 branches 100 twigs and 1,000 leaves.
