Product Sudoku

Inventional Sudoku, this Product Sudoku has two basic rules:
 column, row and 3 x 3 subgrid must have the numbers 1 to 9.
 row, column or subgrid can have two cells with the same number.
 can be solved with the help of the numbers in the top parts of certain
 numbers are the products of the digits in all the cells horizontally
 adjacent to the cell.

Illustration

The top left corner of this Sudoku contains the number 20. 20 is the
 product of the two adjacent cells, which therefore must contain the
 digits 4 and 5. The 5 cannot go in the cell below the top left hand corner because
 the product of the two cells below it would be 20 and 4 in the cell below.
