Daisies

If the other player goes first and they colour in one petal, you have to colour two petals opposite to win.

You = OOO  
Player 2 = IIII

If the other player colours two petals, then colour the one petal opposite to theirs-leaving two petals that aren't next to each other.

If you go first, you cannot guarantee a win unless you both start by colouring one petal.

You can only definitely win if you go second unless the other player doesn't know the game as well as you!
