

Bella P

6 9 1 1 1 2 4 1 4 7

We
I used trial and error and started with 6 and added 9 because on the ~~etc~~ hint it says the first 2 cards add up to 15 and then I used the rest of the numbers to work out the rest of the number.

My cards are 6, 9, 1, 1, 1, 2, 4, 1, 4, 7

We found another solution 8, 7, 13, 10, 6, 13, 9

I think we have found all of the solutions because we tried to work it out backwards but the only numbers we found was the 2 above. We did this using trial and error with different numbers. *as well*
